

INVENTORY MANAGMENT SYSTEM FOR RETAILERS

TeamId:PNT2022TMID28380

PROJECT DESCRIPTION

Retail inventory management is the process of ensuring you carry merchandise that shoppers want, with neither too little nor too much on hand. By managing inventory, retailers meet customer demand

without running out of stock or carrying excess supply.

In practice, effective retail inventory management results in lower costs and a better understanding of sales patterns. Retail inventory management tools and methods give retailers more information on

which to run their businesses. Applications have been developed to help retailers track and manage stocks

related to their own products. The System will ask retailers to create their accounts by providing essential

details. Retailers can access their accounts by logging into the application.

Once retailers successfully log in to the application they can update their inventory details, also users will

be able to add new stock by submitting essential details related to the stock. They can view details of the

current inventory. The System will automatically send an email alert to the retailers if there is no stock found in their accounts. So that they can order new stock.
